

***i-Ready Diagnostic* and Ohio's State Tests (OST) Linking Study Overview**

Curriculum Associates, in partnership with the Educational Research Institute of America (ERIA), conducted a large-scale study on the relationship between *i-Ready Diagnostic* and the 2017 OST. The research found a high correlation between *i-Ready Diagnostic* and the OST. *i-Ready* was also shown to accurately predict end-of-year proficiency rates.

About the Research

ERIA collected data from approximately 16,000 students across 12 districts in Ohio. The research includes the following analyses:

- Correlations between OST and *i-Ready Diagnostic*
- Analysis of *i-Ready Diagnostic* placements and student proficiency, as measured by OST
- Refresh of a proficiency prediction model using 2016–2017 data, that allows educators to use *i-Ready* data to predict end-of-year proficiency on their state assessment

Correlation Between *i-Ready Diagnostic* and OST

The research study found a strong correlation between *i-Ready Diagnostic* scores and scores on the OST assessments administered in 2017.

**Correlations Between the
Spring *i-Ready Diagnostic* and the 2017 OST**

Why Correlations Matter

Correlations are one of the most commonly used and widely accepted forms of validity evidence. Correlations demonstrate that when students score high on one assessment, they also tend to score high on the other, and similarly, when students score low on one assessment, they also tend to score low on the other. A high correlation between two assessments provides evidence that the two assessments are measuring similar constructs.

Predicted Proficiency Rates

Based on strong validity evidence and the needs of educators using *i-Ready*, the Curriculum Associates team developed a prediction model for OST assessment results using logistic regression analysis. **The model proved to be highly accurate in forecasting aggregate proficiency rates across grades and subjects.**

Comparison of Predicted and Observed Proficiency Rates for 2017 OST

i-Ready's predicted proficiency rates were remarkably consistent with observed (actual) OST proficiency rates—often within 1% of observed proficiency for the sample.

Note: The charts above use assessment scores from more than 9,000 winter *i-Ready Diagnostics* and students' corresponding OST scores; similar accuracy was observed across fall, winter, and spring testing scores.

Summary of Research Findings

Findings from the research demonstrate that:

- *i-Ready Diagnostic* scores are strongly correlated with the scores on the OST administered to students in 2017.
- *i-Ready Diagnostic* scores can be used to accurately predict and classify students' proficiency on the 2017 OST.
