

i-Ready Diagnostic and Partnership for Assessment of Readiness for College and Careers (PARCC) Linking Study Overview

Curriculum Associates, in partnership with the Educational Research Institute of America (ERIA), conducted a large-scale study on the relationship between *i-Ready Diagnostic* and the 2016 PARCC. The research found a high correlation between *i-Ready Diagnostic* and the PARCC. *i-Ready* was also shown to accurately predict end-of-year proficiency rates.

About the Research

ERIA collected data from approximately 37,000 students across 14 districts in Colorado, Maryland, New Jersey, and Illinois. The research includes the following analyses:

- Correlations between PARCC and *i-Ready Diagnostic*
- Analysis of *i-Ready Diagnostic* placements and student proficiency, as measured by PARCC
- Refresh of a proficiency prediction model using 2015–2016 data, that allows educators to use *i-Ready* data to predict end-of-year proficiency on their state assessment

Correlation Between *i-Ready Diagnostic* and PARCC

The research study found a strong correlation between *i-Ready Diagnostic* scores and scores on the PARCC assessments administered in 2016.

Correlations Between the Spring *i-Ready Diagnostic* and the 2016 PARCC

Why Correlations Matter

Correlations are one of the most commonly used and widely accepted forms of validity evidence. Correlations demonstrate that when students score high on one assessment, they also tend to score high on the other, and similarly, when students score low on one assessment, they also tend to score low on the other. A high correlation between two assessments provides evidence that the two assessments are measuring similar constructs.

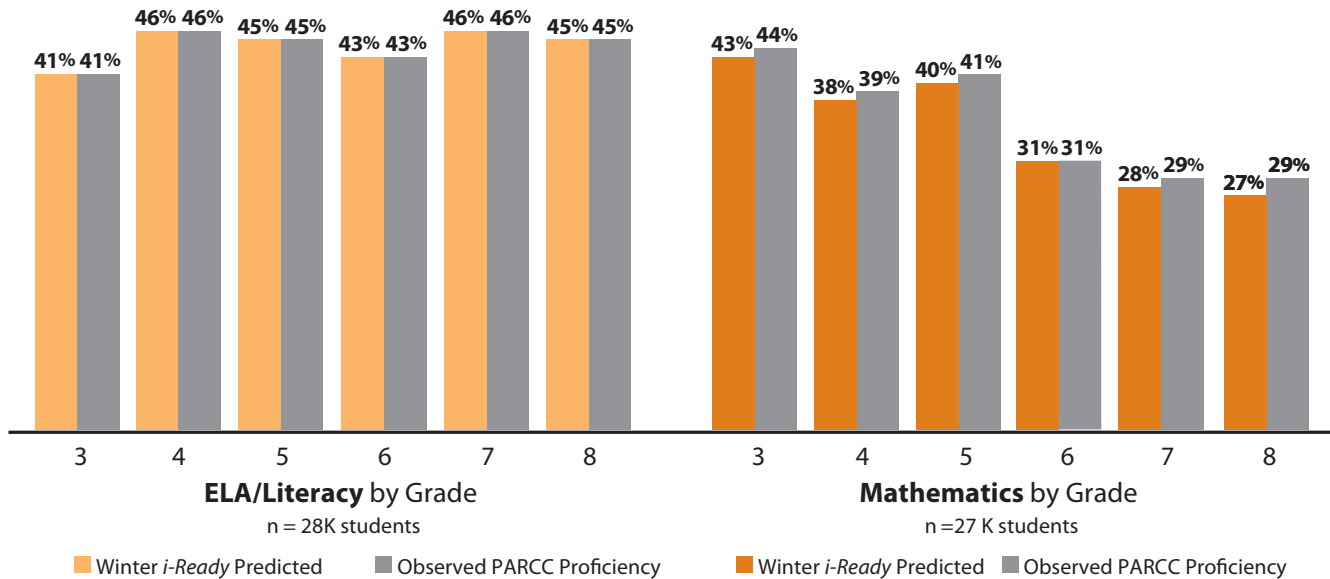

Predicted Proficiency Rates

Based on strong validity evidence and the needs of educators using *i-Ready*, the Curriculum Associates team developed a prediction model for PARCC assessment results using logistic regression analysis. **The model proved to be highly accurate in forecasting aggregate proficiency rates across grades and subjects.**

Comparison of Predicted and Observed Proficiency Rates for 2016 PARCC

i-Ready's predicted proficiency rates were remarkably consistent with observed (actual) PARCC proficiency rates—**often within 1% of observed proficiency for the sample.**

Note: The charts above use assessment scores from more than 27,000 winter *i-Ready Diagnostics* and students' corresponding PARCC scores; similar accuracy was observed across fall, winter, and spring testing scores.

Summary of Research Findings

Findings from the research demonstrate that:

- *i-Ready Diagnostic* scores are strongly correlated with the scores on the PARCC administered to students in 2016.
- *i-Ready Diagnostic* scores can be used to accurately predict and classify students' proficiency on the 2016 PARCC assessments.
